

MLOps

Machine Learning Operations

MLOps applies software engineering and operations practices to machine learning systems. It helps teams develop, test, deploy, monitor, and maintain machine learning models.

Experiment Tracking

Experiment tracking records parameters, metrics, artifacts, and model information from machine learning experiments. MLflow is a commonly used platform for experiment tracking and model lifecycle management.

Deployment and Monitoring

Machine learning deployment makes a trained model available for applications or users. Monitoring can track prediction quality, latency, data changes, and model performance after deployment.
